Established in 1989 as a limited liability partnership, Johnson Favaro has successfully executed over \$300 million worth of construction projects and scores of plans and studies for schools and local governments in Southern California in the past ten years. Recently completed and on-going work includes eight buildings totaling almost 300,000 SF and \$200M in construction value. Two recent projects received LEED certification at the Gold level; both feature on-site energy generation. We support our sustainable design work with in-house LEED accredited personnel. In addition to our school and civic work we enjoy years of experience in the private sector on fast paced, tight budget projects often in sensitive communities. We embrace the goals of creating high quality design under challenging circumstances. Partners Jim Favaro and Steve Johnson maintain day-to-day stewardship of all of the work in the office with their committed, personal involvement on all projects.

Our services include all areas of planning and design from campus master plans to post occupancy services. Our planning work during the last five years includes campus plans, precinct plans, detailed building programs and feasibility studies for dozens of schools and local governments in Southern California. Our building projects range in size from \$1M to \$100M and include a variety of program and construction types. These projects include classrooms, computer, technology, career technical and science labs, student services, libraries, lecture theaters, food services, kitchens, visual and performing arts, physical education and multipurpose rooms, administration, faculty, staff and student offices and support space, commercial office and retail space and any number of additional other building types.
